

Wireless Network Configuration Guide iPad and iPhone

Please check that you are using the **correct help-sheet** for your device. This sheet is for Apple iPhones and iPads running iOS 10+

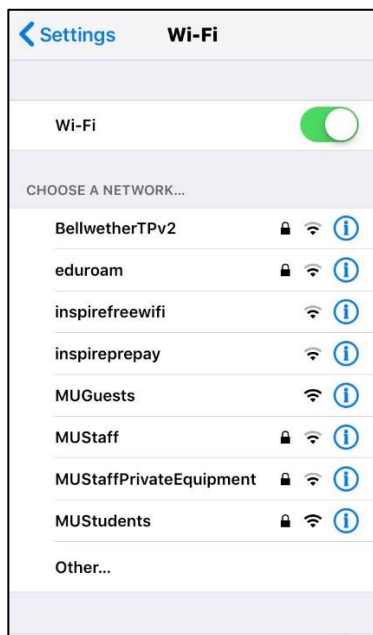

For versions under iOS 10, the instructions will be similar but the icons may be different.

Network Access

All users connecting to the network require Massey credentials.

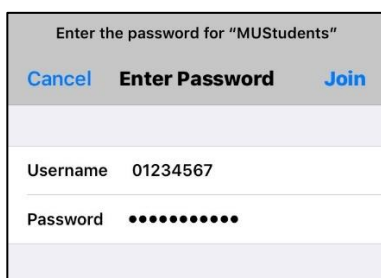

- **Students:** Student ID + Password
- **Staff:** Usercode + Password

The password used is your **network password**, not Portal password

1. Turn on your Wi-Fi. Then select the Wireless network you'd like to connect to.

- **MUsaffStudents** - Student users on any equipment
- **MUsaffPrivateEquipment** - Staff using private or non-Massey equipment
- **MUsaff** - Staff using Massey-managed equipment (those with an ITXXXXXX number)
- **MUGuests** – visitors can use this network

2. Enter your **Student ID** [or **Usercode**] into the *Username* box and your password into the *Password* box, and tap **Join**

3. A certificate prompt will appear. Tap on **Trust** to connect to the network. Your device will now be connected to a Massey network
